EDUCATION

Georgia Institute of Technology - M.S. Computer Science (2023), GPA: 3.61
Georgia Institute of Technology - B.S. Computer Science (2022), GPA: 3.72

EXPERIENCE

Cosairus | Software Engineer **Feb 2024 – Present**

- Designed, architected, and deployed full-stack production software for enterprise customers across cloud, mobile, and web (Azure, C#, ASP.NET MVC, SQL Server, Java Android), owning each project from solution architecture through delivery
- Built features and an Elavon payment integration for Petsoft, pet boarding software processing more than $4 million a year, and handled support
- Architected and delivered PCI-compliant payment infrastructure including OAuth authentication, DEK/KEK encryption, EMV certification, and integrations with Elavon, Apple Wallet, and the Ingenico DX8000 Android POS terminal
- Served as the direct customer contact through every phase of development, turning ambiguous business needs into working prototypes and iterating quickly as requirements evolved
- Used AI-assisted engineering (Claude) for implementation, debugging, architecture exploration, and code review to shorten delivery cycles on production work

---

Stonebranch | Software Engineer Intern **Jun 2022 – May 2023**

- Developed production backend features in C for enterprise workload automation software, delivering four features released to customers
- Built TypeScript tooling that generated JSON Schema for input validation across 350+ customer deployments
- Expanded GoogleTest unit test coverage

PROJECTS

Personal Website - jacksonfkeith.com

- Built and self-host a Python/FastAPI site running in Docker behind a Cloudflare Tunnel; every push to main deploys automatically, with a health check and rollback on failure
- Wrote real-time multiplayer browser games (FastAPI WebSocket servers with bots; Phaser and three.js clients) and an EPUB library with an in-browser reader and text-to-speech narration

Myopia Prediction - Chrome extension for RevolutionEHR - github.com/JacksonKeith11/MyopiaPrediction

- Built a Chrome extension for eye doctors that charts each eye's projected nearsightedness from the patient's age, sex, and prescription history: untreated, with treatment, and the patient's own trend
- Runs entirely in the browser in plain JavaScript and SVG; patient data is never stored or sent anywhere; in trial at an optometry office

Airbnb Price Prediction Utility - Python machine learning model using regression, sentiment analysis, and geospatial data, with a Django frontend

Web-Based Appointment Scheduler - Java scheduling platform integrating the Zoom and QuickBooks APIs, built directly with a client

---

TECHNICAL SKILLS

Languages: C#, Python, Java, TypeScript, JavaScript, C/C++, SQL

Frameworks: ASP.NET MVC, .NET, FastAPI, Django, Vue.js, Android, Phaser, three.js

Cloud, Data & Tools: Azure (App Service, Key Vault, Application Insights), SQL Server, SQLite, AWS DynamoDB, Docker, Cloudflare, Git, GoogleTest

AI: Claude Code, MCP Servers, Multi-Agent Workflows, Context Files and Skills

Payments & Security: PCI Compliance, EMV Certification, OAuth, DEK/KEK Encryption, Elavon

---

ACTIVITIES

Georgia Tech Swim Club - National Qualifier
